### *Corporate Summary*

Vista International Technologies, Inc., develops environmentally safe renewable energy infrastructures that produce electricity, heat, steam and alternative fuels using its proprietary patented technology, the Thermal Gasifier™ system. The system converts municipal solid waste, biomass, tires and other solid hydrocarbon based materials into synthesis gas which can be used to produce thermal energy, while capturing the pollutants and turning them into useful products. It does so by extracting chemical energy from within solid waste converting it into a clean usable energy. The company is well positioned to assume a leadership role in building renewable energy infrastructures.

Additionally, the company owns and operates a waste tire processing facility in Texas. It is the only licensed site for the storage and processing of waste tires in the Dallas area. The tires are processed into tire derived fuel (TDF), sold to cement manufacturers as alternate fuel for cement kilns.

### *Investment Highlights*

**High Growth Sector** – As technologies improve along with cost effectiveness, and the price of fossil fuels continue to increase, renewable investments are projected to continue to rise. The US produced less than 10% of its electrical generation from renewable sources in 2006, and if hydroelectric is excluded, that number drops to less than 3%.

**Uniquely Situated** - Rather than increasing landfill sites or using incineration technology, the Thermal Gasifier™ solution utilizes waste as a resource for the production of clean energy in the forms of electricity, steam or alternative fuels.

**Investor Commitment** - Vista International Inc. owns 50.7 % or 46,017,152 shares of the Company's outstanding common shares and has recently committed to making an additional investment of nearly \$2 million.

## *New Solutions*

### **Thermal Gasifier™**

An unwavering commitment to clean energy was the driving force behind the development of the Thermal Gasifier™ nearly a quarter century ago. Thermal Gasifier™ evolved to extract chemical energy from materials, commonly treated as waste, and transform it into valuable, usable energy and by-products. The Thermal Gasifier™ has proven to be the most economical and efficient method of extracting all available energy from the waste stream. This process accommodates the use of many different solid wastes without any alteration to the unique Thermal Gasifier™ design. This means that Vista International Technologies Inc. can maximize the energy generated from the waste conversion process while still exceeding the most stringent EPA and European Union regulations.

The Company plans to expand its target markets by adding a liquid fuel process to convert the Thermal Gasifier's synthesis gas into a high octane liquid fuel. Municipal solid waste, wood, tires, etc. can be used as a feedstock to produce synthesis gas. The liquid fuel produced can be used in the local market as a higher grade fuel additive than Ethanol.

### *Environmental Commitment*

A commitment to a "clean environment" and renewable energy was the catalyst that drove the development of the Thermal Gasifier™ nearly a quarter century ago. Today, Vista International Technologies, Inc. still believes in responsible stewardship of the Earth's natural resources.

For Vista International Technologies, Inc., "renewable energy" involves the productive use of waste and careful use of the Earth's natural resources. It is our goal and social obligation, to eliminate or minimize pollution to levels that remain in line with or below regulations set forth by the EPA and European Union.

### *Experienced Leadership*

#### **Barry Kemble- Chief Executive Officer and Director**

Mr. Kemble has over 30 years experience in engineering, operations, business development and information technology in the energy industry. Prior to joining Vista International Technologies (formerly known as Nathaniel Energy), he was the Vice President of Business Development of Vista International Inc. and a Director since December 2005. Prior to joining Vista, he was Executive Vice President and Chief Operating Officer of WRC Corporation, a premier service company providing engineering and land services to the North American pipeline industry from 2004 to 2005. Mr. Kemble in 2002 was Co-founder of Omega Six Group, a consulting practice specializing in commercial proposal responses until 2004. In 1994 Mr. Kemble joined Convergent Group as an executive, a former subsidiary of Schlumberger until 2002. Mr. Kemble was responsible for the energy consulting practice including business

development activities across 4 continents. Mr. Kemble started his career in 1973 with Union Gas Ltd. in Canada, which has become a subsidiary of Duke Energy. He is a graduate of the University of Waterloo in Chemical Engineering with an M.B.A. from the University of Windsor. Mr. Kemble remains on the Board of Directors of Vista International.

### **Timothy Peach- Chief Financial Officer**

Mr. Peach has rejoined Vista International Technologies (formerly known as Nathaniel Energy) as CFO after resigning this position in November 2006 to join Vista International as its Chief Financial Officer. Previously, he served in the same role for Nathaniel as of July 8, 2005. Before then, Mr. Peach served as the company's Vice President of Finance from October 2004. Prior to joining Nathaniel, Mr. Peach was engaged as a consultant on a successful initial public offering by Affordable Residential Communities, Inc., a real estate investment trust, and was engaged as an advisor to Duke Energy Field Services, Inc., an oil and gas transportation and processing company, in the development of and overview of their Sarbanes-Oxley compliance programs. In 1997, Mr. Peach joined Convergent Group Corporation, a large scale systems integration and consulting firm in the utility industry, as Vice President Finance and Chief Accounting Officer. In 2000, Convergent Group was acquired by SchlumbergerSema, an oil and gas information and services company. Mr. Peach then served as Chief Accounting Officer and Vice President Finance of SchlumbergerSema North American Operations. He has over 25 years of proven experience in finance, administration and operations which included over ten years with Price-Waterhouse Coopers. Mr. Peach holds a B.S and an M.B.A. from the University of Pittsburgh and is a member of the AICPA and the Pennsylvania Institute of Certified Public Accountants.
